## Vertical Calendar Help Please...

Posted by Mirage - 2011/07/23 20:19

---

Hello,

I know vertical calendars aren't too popular, but so far it's been a great learning tool for me. So What I'm trying to figure out is how to print the year like this:

```
2
0
1
1
```

I already have a bitmap graphic (I think it's stolen from Shadow4) that has the numbers running vertically from top to bottom, 0 on top 9 on the bottom.

I've tried everything I think of and haven't been able to find another Rainlendar 2 skin that does what I want it to do. Can somebody give me some suggestions?

Also can someone point me in the direction of a more in depth guide to scripting than the one included in the help file. While it's handy, I'd like to learn more about how to use some of the lesser known commands (rotate for example).

Thanks in advance for all the help!

Glenn

Try this method:

About the command of "rotate", can refer the clock window in the Chromophore panel (see clock.xml & elements.xml)
