## Rainlendar does not crash - it freezes

Posted by elgringo79 - 2011/07/25 19:43

---

hi,

i'm using rainlendar version 2.8.1-lite on WinXP 32bit.

unfortunately the program freezes (but does not crash) and produces a huge amount of cpu-load when a reminder is showing up and trying to alert me with standard alarm.wav-file.

when i delete the alarm.wav from the settings, everything works fine.

seems that Rainlendar has problems to start playing audio.....

any hints?

t.i.a.

elgringo

It could be a problem in your audio drivers or some codec conflict issue. You can try to upgrade your audio drivers or convert the sound file to wma or mp3 format and see if that helps.

Ok, converting the wav-file to \*.mp3 helped.

I don't know what's wrong with wave-files in this case, but who cares then.

thanks rainy!
