
Synchronized tasks behavior

Posted by romanes - 2011/08/03 15:47

Hi, here are some findings after I synchronized rainlendar tasks with google calendar tasks:

(running on windows 7 64b. :: Rain Version 2.9 (b110) 64 bit)

- when I open and edit synchronized task, its "due date" value jumps one day back (when dialogue is closed)
- it is impossible to change task category. I know, google has no task categories, but rainlendar should keep choosen one
- when I want to edit synchronized task content (text), lines are no wrapped. Instead of this dialog displays "\n" character.

The due date is set incorrectly if the utc time differs from your local time too much. I'll fix that as well as the problem with the newline characters. The categories cannot be supported until Google provides some way to store metadata to the tasks.

These things are easy to omit (take your time :woohoo:) and I would like to say big THANK YOU for programming this app. I have been using Rainlendar for more than three years and today I have bought Pro version. I earn my living as a programmer like you. You must be proud of this app :-)
