
Minor improvement to RSS addon

Posted by bugreporter - 2011/08/15 20:14

Hey Rainy,

I have made several RSS/widget suggestions in the past which you have added to you code. Now I have one more, very minor, improvement suggestion.

Over the past several months I have noticed some HTML tags cropping up in RSS titles. I know that you remove HTML codes from the text but do not do so for titles. If you could add the following to the rss.lua official release I would be greatly appreciative.

```
title = string.gsub(title, "<", "&lt;")
```

Simple and effective:)

Thanks for always keeping the Shadow4 widget add-ons updated with your latest releases.

I added the line to the rss widget and updated the addon.
