## Rainlendar and Quicktime Pro full screen

Posted by sholmes1 - 2011/08/18 15:35

---

Not sure where the issue is, but thought I would mention it. I have seen this problem with Quicktime Pro (WIN) for a while, but think I found the reason. When I play a video in full screen using Quicktime the full screen controls never hide no matter what setting I have them set for. If I close Rainlendar down then the controls hide again. I have tried changing the position settings as well as others with no luck. Any thoughts?

I am using Rainlendar version 2.9 (b111)

Thanks...
