
Crash with Google Calendar

Posted by Kasal - 2011/08/23 09:38

I'm using last version of Rainlendar on two computers and synchronizing with Google Calendar with my Android smartphone. But I have a problem:

I entered event on my Smartphone, my Rainlendar showed without problem (I had have uncheck Keep offline copy). The problem came when I changed the text of the event through Rainlendar. Since then program still crashes and does not correct show event window (see in enclosure).

Have you any idea whats wrong?

Many thanks...

Listing error:

EventData

Rainlendar2.exe

2.9.0.0

4e44bded

ntdll.dll

6.1.7601.17514

4ce7b96e

c0000374

000c37b7

19c8

01cc619ff1c3b612

C:\Program Files\Rainlendar2\Rainlendar2.exe

C:\Windows\SYSTEM32\ntdll.dll

377d56d5-cd93-11e0-baf3-002622ae11c0

I have Windows 7 Home / 7 Pro 32-bit. http://www.rainlendar.net/cms/images/fbfiles/images/rainlendar_crash.png

Try this first: http://www.rainlendar.net/cms/index.php?option=com_easyfaq&Itemid=26#faq42

If that doesn't help follow the instructions in here to create the crash dump:

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=3102

SUPERB! Now it is OK :laugh:

Many thanks
