
Tray Icon Tooltip Flashing

Posted by keithy397 - 2011/08/24 05:52

Is there a reason why the tray icon tooltip is flashing? It does it whether there are upcoming events or not. I've looked through the settings but can't figure out which one is causing it.

I'd prefer the tooltip to show constantly on hover.

Try removing the text for the normal tooltip so that it doesn't pop up (Options->Advanced->Tooltip Format).

I removed the text as suggested but it still flashes.

Holding down the shift key pauses the flashing which will do for now, but it's not a fix is it?

The weird thing is, it didn't happen before the update so it must be a setting I've missed or forgotten about.
