
no alarm saved in a google-calendar

Posted by Marlowe - 2011/08/25 11:32

It's the same Problem like this:

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=10752 (last message at Page 1)

I use a google-calendar in Rainlendar.

I can add a new alarm to an event (was saved in a google-calendar) in Rainlendar and save it with "OK", but the alarm was not really saved:

because i open the event in Rainlendar again and there is no alarm to see.

If i add a new alarm to an event in a local calendar, it was really saved and worked correctly.

Can you run Rainlendar in the debug mode and send the debug log to the Rainlendar's support address? I can check from the log why the alarm gets removed.

It's no Bug, it's a (currently hidden) feature ;-)

In fact: i don't know that the Rainlendar alarm doesn't work with the "Default Google Methods" setting, if no default reminder in the Google Calendar's website defined.

But in such case it would be nice, if Rainlendar displayed an error message.

Changing the calendar setting in Rainlendar to "Always use alert" fixed the problem.

Thanks for helping.
