
Bug with my mod of clear skin by jid

Posted by celticrenaissance - 2011/09/01 09:09

Hi I've a wee bug that has developed after I modded clear skin by jid. Whenever I refresh the skin or move through the months of the calendar, the calendar drops a number of pixels down the screen. I suspect this has to do with the bitmap line i put at the bottom of the calendar so that it fitted into the enigma suite for rainmeter. However I can't see what I might need to change to rectify this. Any ideas???

here's my code and I have uploaded the bitmap line! <http://www.rainlendar.net/cms/images/fbfiles/files/Line2.zip>
Cheers in adavance for all/any help

Not really understand your problem.

Can you posted the image of the calendar?
And point out where the problem.

here's 2 pictures. the first showing how i want the skins to sit together, and the second showing how the calendar drops down when i refresh rainlendar or skip through the months using the buttons

not sure if posting the pics worked i will attach them as a zip file if not.

Your problem is:

The calendar's top is exceed the screen's top, so when you refresh or redraw, it will auto adjustment to snap the screen's top-edge.

Look your calendar's image and ini file:

If the month's name is at the calendar's top, the setting should been " MonthY=0", but your setting is "MonthY=65", so you have 65 pixels space at calendar's top.

Suggest you modify "MonthY=", "YearY=", "DaysY=" and all "Y=" as you likes.

Nice one. This is on just the sort of oversight I'd thought it had to be. However, when I set the Y axis to 0 for Month and

Year both disappear entirely. I can get them fully back on screen when I set them to Y=25, but then I still have the drop down problem on refresh and when I move through the months. Any ideas????

Confirm your problem:

You mean, the calendar will drop a little bit every time refresh or redraw? That is, if continuous refreshing several times, the calendar's position will become very low? If be this, i don't know why.

Or that, the calendar will only drop once, then it will keep in the same position? If be this, after refresh, don't move calendar again, but move eventlist to the position you want.

It's the latter. But it always drops to the same position from the top of the desktop irrespective of how high i place it. So it sounds like your original solution was close to the mark. The issue now is that nothing displays when I set the Y axis to 0 for Year and Month. However, I seem to have fixed it to my satisfaction by setting the Y axis to 18 (which is the first position in which the month and year are fully visible)- at which point the drop down bug seems to go away. It would be nice to find out quite why I can't set the Y axis to 0, but as it stands it all seems to work. Thanks for all your help!!!!

The issue now is that nothing displays when I set the Y axis to 0 for Year and Month.

...
It would be nice to find out quite why I can't set the Y axis to 0.it's because the way of text-align. Your original setting are MonthAlign=32(Bottom-Left), YearAlign=33(Bottom-Right), please change them as MonthAlign=0(Top-Left), YearAlign=1(Top-Right).
