## View by week or month / view or hide or print

Posted by jokr - 2011/09/05 05:10

---

Shadow4.r2skin (1.9) has fine week-and month-view. But they need a lot of screen space.

1.Wish: The Views with mouse click to hide or not hide (or separate windows?)

2. Wish: Print function for they views

You can toggle the windows with keyboard shortcuts (alt+1, alt+2, ...). Or you can create a global hotkey for that purpose too: [http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=8&id=15856#15892](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=8&id=15856#15892)
