
crash when a reminder comes up

Posted by gringo - 2011/09/08 06:06

Hi,

whenever i try to start rainlendar it crashes.
i think it is because of that reminder of an appointment that comes up.

already re-installed it, didn't help :(

I can confirm this issue, have it here as well, to be more complete as TS, I created a dumpfile

I've created the dump using the 32-bit version of rainlendar. I tried the 32-bit version after the 64-bit one to test if the 32-bit version crashes the same way.

The crash only happens if rainlendar wants to give an alert right after syncing with the Google Calendar I use. I do not know if alerts from other sources than Google Calendar crash the program as well.

Hope this information is helpful.

(file password is "rainlendar2")

i dont use google calendar, so it might not have anything to do with it.

Thanks, that seems to have fixed it.

Sorry, I hadn't checked the FAQ thoroughly.

Appreciate the quick support.
