
Wrong (or missing) localization in old event/tasks

Posted by Jorge_Luis - 2011/09/09 20:52

I've seen this before but until now I couldn't reproduce this.

Before some date all the event headers are not localized. It says "Sunday" instead of "Domingo" for example. In the picture, at some point between August 27th and 28th the names begin to be localized, but not older ones. It's really weird. <http://www.rainlendar.net/cms/images/fbfiles/images/screenshot-fcb780616a2b182b59269ff6a40139e7.jpg>

The localization is handled differently for dates that are more than a week from the current day. I can't remember anymore why but it could be related to the plural form on some languages. I can probably remove that code if it's the reason for this since I don't think that's even used in any language.
