## weekend every 2 weeks ?

Posted by sylvio2000 - 2011/09/10 06:12

---

Hi, I am always working 10 days and then I have a weekend of about 4 days.

-----  
example:

work: monday - wednesday of the following week

weekend: thursday - sunday  
-----

Is it possible to define a weekend of 4 days every 2 weeks?

EDIT:  
I found a solution. You can define such a weekend with an "event". Really simple. But maybe this could be integrated in upcoming versions. Take it as a suggestion :)

I don't think this would be possible. You can set a weekend from Th to Su, but it will repeat every week. Rainlendar used the current definition of 1 week = 7 days based on the Gregorian Calendar. In your case, you're talking about a week of 14 days.

Of course isn't the same (because it's an old one), but someone could ask to do the French Republican Calendar, which have weeks of 10 days.
