
Wunderlist Support

Posted by s3bastian - 2011/10/04 04:57

I am currently using Remember the Milk for task management but since they only offer their basic services for free (no android client, etc.) I am open for alternatives.

www.wunderlist.com looks very interesting, are there any plans to integrate it in Rainlendar?

They don't seem to provide any API to access the tasks so it's not possible to support that service.

True, there is no official API support.

But wunderlist itself seems to be open source: <https://github.com/6wunderkinder/wunderlist> so the interface should be easily accessible.
