## Annoying Can't Connect Warnings

Posted by peaboy - 2011/10/05 20:30

---

When you start your computer offline Rainlender complains that it can't connect to GMAIL with a very annoying modal dialog that stays on tops of all applications. I'd like to be able to turn this off.

In my setup (on a boat) my LAN is frequently not connected to the internet so basically when I start my computer and we're off the net I have to close Rainlender because the error message only happens when rainlender starts. If I'm online then go offline the app doesn't complain at all (which is probably another bug)

Thanks,  
-p

If you don't want to see the error messages you can enable the "Suppress Errors" for the calendar in Options->Calendars.

So THAT'S where that is... I assumed there was a setting but I was looking in the wrong place.

Thanks!
