## Lost setting \"show event start time\"

Posted by Iljitsj - 2011/10/11 02:50

---

hi Rainy,

I just came accross a strange thing:

When I localise my Rainlendar to custom language Dutch, the Events list does not display the start and end time in the window.

When I enable the boxes for Show event start time and Show event end time, and press ok, nothing changed after refresh - no times shown. When I then reenter the advanced options, both boxes have been reset.

If I switch back to the default language, the settings are stored correctly and the eventslist shows the times. If I then change the language to Dutch, the times are also shown and all seems to be correct. However, if I then re-enter the options screen (not even the advanced part) and press ok, the times are removed.

Hope this helps in improving your excellent program even further!

Rainlendar version: 2.9 (b111) 32 bit / Compiled on Aug 12 2011

Thanx,  
Iljitsj

Verify that there are no two settings in the translated list which have the same title. The advanced settings are identified by their names so usually duplicates are the reason for this kind of problems.

Thanks for the hint.

I checked the translation and it turns out that two section of the advanced options were given the same name (Events List and Schedule both named 'Agenda') so they were grouped under the same title. There were about 4 entries with the same name in both lists.

I corrected the language file and all works perfect now.  
I also uploaded the file to your site for everyone to enjoy! B)
