
Connect Rainlendar with iCloud

Posted by FloFi - 2011/10/12 19:11

Hi,
I bought the Pro Version because I need the Google Calendar function.
But now I'm changing to iCloud and tried to insert the iCloud calendar into rainlendar.
It does not work if I use Mac iCal and choose the shown iCloud calendar.
then my rainlendar calendar stays empty..

Does anyone of you know how I could connect iCloud and rainlendar?

At least at the moment there are no plans for iCloud support.

Too bad...
would be a very nice upgrade!

I HOPE THAT THE ADMINISTRATOR OF THIS SOFTWARE RECONSIDERS. THIS WOULD BE AN AWESOME
UPGRADE. IT WOULD CONNECT A LOT OF US IPHONE USERS. THANKS AGAIN.

Oh please, please, please. I would pay an extra amount just for this function.
Please rethink about that...

Hi,

is it still impossible to connect icloud and rainlendar pro?

Maybe. The latest beta version supports caldav so you might be able to use it to connect to the iCloud. I haven't tried this myself though. What you need to do is to find out the uro for your calendar. You can use e.g. this tutorial to locate it: <http://skangerland.blogspot.fi/2011/10/how-to-get-ical-with-icloud-working-in.html>

uro should be url I suppose ;)

I also found this:

http://www.macwrench.de/wiki/ICloud_Mail_Account_unter_Snow_Leopard_verwenden

But I wasn't able to start the latest rainlendar beta under OS X 10.8

Hey guys,

the 2.11 b122 started fine on Mac OS X 10.8!

I also had not to set up the iCloud, rainlendar just read the configuration from iCal on the Mac!

So everything is Perfect! :)
