## Category questions

Posted by Andre Linoge - 2007/01/06 20:57

---

I have added some new categories in the list. I have checked the elements.xml file and noticed that non of the new categorys had been added. I like to have different images and fonts added to the new categorys. How can i do this??

Using the Dutch language file, i noticed that when adding a new task, the appearance of the categorylist is in Dutch, the elements.xml file however does not show these categorys, only the newly added ones. Where can i find this complete list??

TIA

I like to have different images and fonts added to the new categorys. How can i do this?? See below how to enter new categories. If you want the image and/or the font changed you have to put them into the elemenst.xml file yourself. Copy an existing item and change what you like.

The default categories are shown in the Advanced options, translated to Dutch in the language file and stored in the rainlendar.ini file in

C:\Documents and Settings\USERNAME\.rainlendar2\

You can add a new categorie in the Advanced Options (click on the line and then on the ... button at the end). You can enter it in Dutch or in English, but it the last case you have to add it into the language file as well with the Dutch translation to see the Dutch translation.
