
No Skins for R 2.9

Posted by suwo - 2011/10/28 13:45

Hello.

I installed Rainlendar 2.9. I download a few skins (for example _New_Dark_brown.r2skin). But i can't import it. The message is: <http://www.rainlendar.net/cms/images/fbfiles/images/fehler.png>. Is it a problem of the new version. Before i used an older one, and there are no problems to import. Has somebody any idea,

thx,

suwo

A little correction: the skins are not imported, but installed.

I don't know German, but that message means that the skin.xml file which need to be on the root of the zip file (the r2skin it's a zip) isn't found. Maybe the file is from the old skin version, so try looking for the Rainlendar2 user folder, create a new folder and unzip the file to it. If it's an old skin version, then you will find many .ini files instead of .xml.

Or, simply, try to copy the .r2skin file directly to the user folder and then refresh the app.

Hallo.

That's it: Copying the skin in the skin folder.

Thx a lot,

suwo
