
Completed tasks in Rainlendar are different

Posted by fl0 - 2011/11/18 13:17

Hi!

I have a problem, which is very similar to another bug reported here: "complete Todos are different from Outlook".

Whatever I do in Rainlendar is almost instantly shown in Outlook. Perfect so far!

Everything then automatically gets synced to the icloud. EXCEPT deleted and finished tasks marked in Rainlendar. The same action in Outlook shows no difficulties with the sync service. Rainlendar must somehow mark them different than Outlook, thus they aren't recognized as deleted by the icloud sync service and remain in the cloud.

I'd appreciate you lookin into this.

Great tool so far, keep up the good work! :D

Best regards,

Florian

Does this happen only with recurring tasks or with single tasks too?

I don't know about recurring tasks, I'm only working with single 2Do-tasks

Ok. I'll check if I can find any differences how the Outlook and Rainlendar mark the tasks completed.
