## Google Error! Unable to upload the event

Posted by clancolin - 2011/11/19 19:50

---

Hi

I found a support question entitled "Google Error! Unable to download calendars", but in my case I'm getting "Unable to upload the event"

Server returned the result :(0) 400 Bad request  
Moved Temporarily Moved Temporarily The document  
has moved here. Failed to process the recurrence rule.

Can you advise please? Thanks.

The error means that Google doesn't understand the recurrence in the event. What kind of event did you try to create?

I am having the same problem on Rainlendar Pro 64-bit 2.9

Unfortunately I only know I changed some birthday titles a few days back, no more details, also not in the log.

edit: to add to this: I also deleted some double birthdays

The problem is caused by the exception days in a yearly recurring event. The bug has been fixed in the latest beta version.
