## Delete word shortcuts in textboxes

Posted by novadam - 2011/11/25 11:51

---

A fairly standard keyboard shortcut for deleting the previous word is Ctrl+Backspace (under Windows - I think there's a Mac equivalent, probably Alt+Backspace?). Rainlendar doesn't seem to support this which makes editing event names/descriptions very slow.

I'm sure many would appreciate this shortcut and related ones like Ctrl+Delete for deleting the next word. Could it be added? (Ctrl+cursor keys are working on the other hand!)

Thanks for this great app!

The default edit control doesn't seem to support this functionality. I'll add to to my backlog and see if it could be implemented.
