## Upgrading from 0.19.3 Question

Posted by Bast - 2011/12/04 05:29

---

I'd like to upgrade to the newest build, but am running (and have been running) 0.19.3 for years so it's full of my events and reminders which I don't want to have to recreate. Is it possible to import those events into the newest build?

Thanks for any help you can give me.

Welcome to the Forum, Bast.

If you have an older version than 0.22.1 you need to first upgrade to 0.22.1 (<http://www.ipi.fi/~rainy/Rainlendar/Rainlendar-0.22.1.exe>) and use that to export the events either as iCalendar or Rainlendar's ini-format.

Then run Rainlendar2(the new build) and it will ask you to import your old events and tasks when it is started the first time.

Thank you, anoob! You're so wonderful to help me. I shall do that very thing right now.
