## Menu bar and alarms

Posted by gombi - 2011/12/06 02:52

---

Just begun using after iCalView. Have a Mac 10.6.8. Rain shows in Menu Bar but when I go to click on an item there is no drop down menu.

When I go to add a new event or edit an existing one, I get no response from the Alarm icon. Have tried all the Options to no effect. Have uninstalled and reinstalled. Have checked permissions.

What else is there to do?

I'm aware of the problem with the menus but I don't know yet what causes it since I haven't been able to reproduce it.

The alarm button is enabled only for calendars which support alarms (e.g. the iCal calendar does not). Note also that for tasks you must define the due date first before you can set the alarm.
