
Rainlendar 2.10 BETA build 113

Posted by Rainy - 2011/12/06 08:57

Build 113 can be downloaded from here:

Windows (32-bit): Rainlendar-2.10.b113-32bit.zip
Windows (64-bit): Rainlendar-2.10.b113-64bit.zip
Linux TAR (32-bit): Rainlendar-2.10.b113-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.10.b113-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.10.b113-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.10.b113-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.10.b113.dmg

MD5SUMS-b113

This is beta version! It has not been tested.

Changes:

- o Setting certain import limits for the Google calendar caused an error.
- o Task in the month view showed incorrect time.
- o Fixed possible crash bug in the Google Calendar on error situations.
- o If saving the settings to disk fails it is tried again after a small delay.
- o Added an advanced setting which defines how many previous locations are remembered.
- o The title of the event/task is shown in the error message if uploading to Google calendar fails.
- o Uploading yearly recurring event with exception dates to Google calendar failed.
- o Added Dismiss all and Snooze all menu items to the alarm's context menu.
- o Added slim versions of the today image for the Shadow3 skin. The today image is now drawn under the event icons.
- o Added advanced option to define the double click action in the calendar (show menu or create event).
- o Multiline text was not drawn correctly if the vertical align was set to center or bottom.
- o Schedule was drawn incorrectly if the time period was set to something else than 60 mins and the first shown hour was defined.
- o Disabled image buttons are shown better in Windows 7.
- o Added possibility to choose the folder of the Toodledo tasks.

"Added possibility to choose the folder of the Toodledo tasks."

Thanks for adding that - seems to work great! :)

The weather widget is not working properly with this beta.

The window is a little too small, thus the weather graphics are expanding to the bottom of this window.

The toodledo folder functionality stopped working for me after a few days even though I hadn't changed anything in Rainlendar or Toodledo.

I've left it for a while hoping it would come back but it still isn't displaying any tasks from my chosen folder :(

I'm also seeing the weather widget problem.

A change for the multiline drawing broke the text alignment in some situations. I'll fix that in the next build.

I checked the Toodledo folder filtering and at least in my system it seems to be still working fine. You could check from the Rainlendar's log file if the folder identifier is correctly read (the log should say: "Toodledo: Found folder id for "). The log should also show the ignored tasks like this: "Toodledo: Ignored the task "" because it belongs to a different folder."

Well, assuming I'm looking in the correct file (rainlendar2.log), those lines don't exist. The only mentions of Toodldoo (apart from being included in the list of the available plugins) are as follows:

11:09:07: Toodledo: Url:
http://api.toodledo.com/2/folders/get.php?f=xml;appid=Rainlendar;key=f00db677974cf6ae57063a42dfc2cdd6
11:09:07: Toodledo: Result: (0) 200 OK.

You need to start Rainlendar in debug mode to see all the log messages. To do this start Rainlendar from command line and add --debug argument for it or if you use Windows you can start if from the "Debug Rainlendar2" link that is in the program folder.

Hi

I configured toodledo account with this version of the rainlendar. Everything works fine except when i select a todo and right click to it to make it completed. It is not shown in toodledo.com as completed. It is shown as deleted.

Please fix this bug

thanks

Rainlendar sets the completed date incorrectly to the tasks so Toodledo doesn't show them. I'll fix that.
