[Solved] A strange behavior about %x

Posted by anoob - 2011/12/07 10:44

_____

Because i usually use English as skin language, so have no find it before.
If I set the date-format to %x, all languages can be displayed correctly (e.g. 08/12/2011), except Traditional-Chinese.
When use Traditional-Chinese, it will more shows the day of week. (see image: extra part is Chinese's Thursday)

Why??

_____

Oh! don't mind this question, i have find the reason.
It's because my local date-format was set to "yyyy/M/d dddd"
