## Choosing a sound file for alarm on Lion OS

Posted by raymond007 - 2011/12/07 18:26

Hi

I am running

Rainlendar Pro  
Version 2.9 (b111) 32 bit  
Build on Aug 12 2011

on Mac OS X 10.7.2

Wanted to add a sound for an alarm I set.  
Browse for file pops up a window, but whenever I click on the browse window, I get the fault sound, and the only thing I can click for action is the small window that calls fro the browse window. It's like it does not release focus. Or something. I don't know to program, it's guesswork.

Let me know if I need to detail more. I searched for the topic but not found it. That few people use Rainlendar on MAC and from that pool that few use sounds for alarms? or is it just me :dry:

thanks [http://www.rainlendar.net/cms/images/fbfiles/images/The\\_End.png](http://www.rainlendar.net/cms/images/fbfiles/images/The_End.png)

Confirmed. The file dialog opens behind the window. I'll see if that can be fixed.
