## Google Accounts 2-step verification

Posted by Frelon - 2011/12/10 06:36

---

Google has recently improved security for it's GMail users by offering 2-step verification, which sends a verification code to (in my case my iPhone) so that I can logon to GMail securely on my own and other PCs.

Worked very well until I realised that my Events list was not showing up in Rainlender!!

Took me a while to realise that I needed to add Rainlender to my GMail 2-step verification apps listing (Manage Application Specific Passwords in Google Accounts)

As soon as I had generated a new password and entered this in place of my previous GMail password all Events suddenly appeared in Rainlender.

This info may need to be added somewhere in the Rainlender help files.

Many thanks for an excellent piece of software.

Michael

I changed the error message which Rainlendar shows in this case to display instructions how to create the application specific password.

Excellent Rainy, well done for acting so quickly. I am sure other GMail users will appreciate this info.

Hello!

Sorry for my English? I'm from Russia.

I have 2-step verification and to try connect to google calendrs get error message^

Google error (Dummy)!  
Unable to authenticate to Google.  
Server Returned result: (0) 403 Forbidden/  
Error=BadAuthentication Info=InvalidSecondFactor

Where is "instructions how to create the application specific password"

Help me.

PS: if I disable 2-step verification on Google then "OK"

- Go to your Google Account settings with your web browser.
  - Click the "edit" link next to "2-step verification"
  - Click "Manage application-specific passwords"
-
