Savannah skin, colors aren\'t working

Posted by Michiel26 - 2011/12/13 05:08

_____

Hi all,

I'm using Rainlendar to display my different Google calanders.
All is displayed, except I can't get the colors to work in my Agenda list.

I've tried the following:

Added a new category in the theme / category section (named "private")
Set the color of both background and color calendar day to blue.
Went to the calenders tab and set one of my calenders to display category ("private")
Went to advanced and set override visible category to "always"

I would like to get the text in the right color, depending on the google agenda type.
But I cant get any colors at all in my Rainlendar, not in my calender screen, and not in my Agenda screen. Any help will
be greatly appreciated.

Kind regards, Michiel

_____

The category customization for Savannah doesn't allow changing the text color at the moment but I can add it to the next
version.
