## Adding colors to the \"Today Marker\"

Posted by PdL - 2011/12/16 18:05

---

Hello,  
I've got a small (and maybe very easy) question.  
Is it possible to add colors to the color-menu when choosing the color for the today marker. I would like to add white and/or black, but can't work out how to do this.  
I'm using the Shadow4 skin in combination with Chromophore Plus.

Thanks!

The setting only changes the color's cue so it's not possible to use it to make the image black or white. So, you would have to edit the skin and change the today image file or modify the color saturation and value. The color parameters are defined in the elements.xml. You can find details how to edit the skins from Rainlendar's help (check the skinning tutorial and the skin reference).

Thank you for your reply.  
I'll give it a try! B)
