How to show today\'s events in window?
Posted by tools400 - 2007/01/07 14:46

_____

Is there a way to show today's events in a window like Rainlendar 0.22 does?

I prefer to see today's events in a window in the middle of the screen. I am afraid of that I do not notice the (little) bubble above the tray icons.

Any comments would be greatly appreciated.

Tools400.

_____

It is not supported at the moment.

It's a pity. If it is not a big deal you probably want to add that feature?
