
Rainlendar2 crashes on openSUSE 12.1

Posted by przemcios - 2012/01/04 00:27

Hi, my rainlendar crashes when I want to do anything with it,

```
przemek@linux-5hb3:~/Programy/Programy/rainlendar2> ./rainlendar2
./rainlendar2: /usr/lib/libcurl.so.4: no version information available (required by ./rainlendar2)
The program 'rainlendar2' received an X Window System error.
This probably reflects a bug in the program.
The error was 'BadMatch (invalid parameter attributes)'.
(Details: serial 4403 error_code 8 request_code 62 minor_code 0)
(Note to programmers: normally, X errors are reported asynchronously;
that is, you will receive the error a while after causing it.
To debug your program, run it with the --sync command line
option to change this behavior. You can then get a meaningful
backtrace from your debugger if you break on the gdk_x_error() function.)
```

anyone can help please ?

=====

Re: Rainlendar2 crashes on openSUSE 12.1

Posted by Rainy - 2012/01/04 12:18

What kind of backtrace do you get if you run Rainlendar in a debugger? What about if you start it with the --sync argument (run --sync) in gdb?

Re: Rainlendar2 crashes on openSUSE 12.1

Posted by Rainy - 2012/01/07 10:42

Unfortunately there doesn't seem to be anything useful. I downloaded a vmware image of the opensuse and installed Rainlendar on it but it seems to work just fine so I'm not really sure what could be causing this. You could try to disable the native transparency in Rainlendar if you have it enabled and see if that helps. You can do that by changing the TransparencyType values to 0 in the settings file.

Re: Rainlendar2 crashes on openSUSE 12.1

Posted by przemcios - 2012/01/07 13:02

that's not working, it only works when I delete whole dir .config/.rainlendar2 but only for a moment and then it crashes again, the same bug i noticed on my girlfriend's laptop on Kubuntu 11.10 (64 bit),
