## Help on deleting events

Posted by squalo - 2007/01/07 16:44

---

I got the Pro Version (2.0.2) running with a WEBDav access to my calender file.

It's now impossible to delete an event.  
After refreshing it's there again!

I'm running 3 PCs with the same calendar file on my WEBDav share.

What I'm doing wrong?  
Any hints were apreciated!

BR

Are there any errors in the Rainlendar's log file? What does the Webdav server's log say? Is the file updated in the server?

Well the only log file I see is the local Rainlendar2.log and there are no error entries about deleting listed.

Left out this, I finally got the event deleted.  
Perhaps while I'd set 'keep offline copy' tag again to false?

I'll let this flag true on my notebook and check out the next time deleting an event.

thanks for replying
