Linux DEB (64-bit): rainlendar2-pro\_2.10.b114-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.10.b114.dmg

MD5SUMS-b114

This is beta version! It has not been tested.

Changes:

- o Added better error message if the Google account has two factor authentication enabled.
- o Added text customization options for Savannah skin's categories.
- o Add alarm button now opens the file dialog directly in Mac because multiple modal dialogs caused problems.
- o The completed date was set incorrectly to Toodledo tasks.
- o The previously selected days for weekly recurring event are cleared when the start date is changed.
- o Incorrect day was sometimes selected for weekly recurring tasks when they were edited.
- o Due date was calculated incorrectly for biweekly tasks which started on Sunday.
- o Weekly recurring multiday tasks were not shown correctly in the calendar.
- o The Outlook icon for tasks is now set correctly.
- o Completing Outlook task sets it's percent to 100%.
- o Added possibility to change the width of the Chromophore skin's list windows.

A new bug :

Weekly recurring multiday event(same with task) will become to only one day(the default day) was checked, when next time open dialog and click "OK".

Hmmm... opens fine with Mac's and WinXP's build in unzipper. Try downloading the file again.

In the future, is there a possibility that you provide the beta pro version also as a tar-file for Linux and not only as a Debian file?  
Would be really appreciated because at the moment only the beta version is working for me and I want to purchase the pro version.

All beta builds (including the tar files) are for the Pro version.
