## How to view all occurrences of an event?

Posted by eyebox - 2012/01/17 03:32

---

Hi,

I have a recurring event with exceptions. Is there currently a way to see all dates of the event in a compact list? I was trying the Manager for that, but unfortunately it shows my recurring event only as a single entry, instead of listing all dates in the event takes place.

I see how listing all dates could be a problem with infinitely recurring events, but maybe one could limit such events to one year or so.

Try (multi)selecting the event(s) you want and then select "File -> Export -> CSV file" (Comma Separated Values, it's like a .txt file) in the Manager. There you can select the range of time. It won't be a really good text to read, but you will have "sorted" (in some kind of way) the info for the event (with dates for each one).

Thanks for you suggestion. It turns out that the exported CSV file also contains the exceptions. I'd say this is a bug.

However, even if this was fixed, being able to view the recurring events (excluding the exceptions) in the manager GUI would be very nice. How about an check box called "Separate recurring events" including date range selectors next to the "Search" field?

I'll see if it would be possible to implement something like this to the manager dialog.

Great, thanks for considering!
