Can't u make Rainlendar synchronize with outlook?  
Its only getting information from outlook, its not putting new information in?  
Is there a way to fix this?

Currently the Outlook support is one way only.

Are there plans to make it sync both ways?

Hi, not quite sure where to post this, so ill try here:o)

Im currently trying to synch my Outlook with Rainlendar, but im unable to export from Outlook in a format R can read. Is there a "how to" description available anywhere?

Is it possible to export Tasks from Outlook to R as well?

Rainlendar should be able import the iCalendar files exported from Outlook. If it cannot there probably is a bug somewhere (in which case attach the file and I'll take a look at it).

The Pro version of Rainlendar is able to read both the appointments and tasks directly from Outlook (i.e. no importing required).
