
Countdown Widget doesnt work

Posted by Chocklad - 2012/01/23 04:30

hello, i downloaded the latest Countdown widget for shadow4 and when i change the date from 2010-01-01 to something else, it gives me and error in the widget. even when i change the date back to the original, still an error occurs. can someone help me?

I tried the countdown widget but it seems to work just fine. Can you send a screenshot of the settings that you tried?

Hi,

my countdown applet works fine for me too ! BUT... I installed 2 more instances of the applet in Option|Skin Shadow4 "active skins" from left to right pannel. Those additionnal countdown applets refuse to customize ! They always revert to the default countdown to New Year date :silly: !!!??? Any thoughts ?

Best regards and congratulation for this TERRIFIC application !

Welcome to the forum, Benny.

Your problem was fixed in the Build 121.

- 29 Jul 2012

o Skin settings were not saved correctly if there were multiple instances of the same window active.

Unfortunately, to solve this problem you need to download the beta version from this forum (last is Build 127)

Thanks for the welcome :) !

No prob... I'll download the beta 127.

BTW: all window parameters have a General|enhance configuration between "Visible" and "Size". What does it do ? I haven't figured it yet :side: !

Regards,

iBenny

Did you refer to "Grow upwards"?

From help: The Grow upwards will make the window change its size upwards so that it can be placed at the bottom of the desktop.

If it's between "Visible" and "Size", YES (I did a rough translation from french). Thanks :) !
