
Transferring iCal to Rainlendar

Posted by Euzema - 2012/01/24 10:32

Do the alerts transfer? My iCal is giving me major problems where it seizes up for long intervals and I can't use it. So, I exported to Google Calendar but discovered the alerts did not transfer, rendering it useless. Do the alerts transfer if you import iCal events into Rainlendar?

You should be able to transfer also the alarm with your events if you export the calendar from iCal to an *.ics file and import that to Rainlendar.
