Alarms are not working.

Posted by nicknemer - 2012/01/28 08:15

_____

Hi, I just installed Rainlender, its great, but I'm having some problems.

I set up some recurring tasks with an alarm to go off 1 or 2 minutes before the due time, with a custom alarm but also with the default alarm sound. The thing is that for the first day, the alarm went off, but the next days it did not. Nothing happens, the tasks turn red, but there is no sound or pop-up alarm. If I modify the settings for the task,after the task is due, (change how many minutes before the due time), I get the pop-up alarm, but I have to do this daily and it is as a reminder that I missed the task.

Edit: Maybe there is some connection to the fact that I used a template with the custom sound to add these tasks.

I'm using
Rainlendar Lite Version 2.9 (b111) 32 bit Build on Aug 12 2011 Windows 7 64-bit

Thank you!
