## NAS shared calendar problem

Posted by caluser - 2012/02/02 20:22

---

I am trying to set up a shared calendar on a network. I am having a problem with trying to store the calendar file on a d-link enclosure with two drives. I have tried using http but all i can find is the IP address for the enclosure. I don't seem to be able to set the file path to a specific drive.

I want to avoid using ftp in this case. Has anyone ran in to this and come up with a solution? Thanks in advance for any help.

Welcome to the forum, caluser. Although i am not using NAS, but suggest you to look your NAS Manual about how to "Mapping a Drive" or how to "Setting FTP Sever".
