---

when I create an event or task, it mesnagem of a "clerical error in recording, it is not possible to open the file for writing ... default.ics" .. but it creates the action.  
when I back the manager and try again (restore) the back-up he did not show anything, but ask to import the file default.ics .. he's wrong but runs.  
what to do?

Have you changed the location of the default.ics file for the calendar or are you using a portable installation? The default.ics file must be located somewhere in your file system where Rainlendar has write access.
