## Inconsistent repeating query parameter Inconsiste

Posted by mickey\_megabyte - 2012/03/06 05:46

---

Hi,

I've noticed that for the last few days that rainlendar hasn't been syncing with google calendar. i had error messages suppressed, so i turned them back on, and have attached the error message:

Google Error (Gooqle)!Unable to download the calendars.  
Server returned result: (0) 400 Bad Request.  
Inconsistent repeating query parameter  
start-min

<http://www.rainlendar.net/cms/images/fbfiles/images/rainy.PNG>

How do i get rainlendar to work again?

i'm using rainlendar pro version 2.9 (b111)

thanks in advance

ok - i sorted this problem out by changing the 'import limit' setting in the calendar options to 'everything'.

previously i only loaded in the latest six months' events.

strange how i've only had this problem for a few days, considering that i changed to 'six months' a long time ago...
