
Configuring Rainlendar

Posted by oded - 2012/03/06 16:21

I have installed Rainlendar on my new computer (win 7)

Both "todo" and "events" windows are very narrow and I can see only between one to two words of the text.
How can I make these two windows wider?

Thanks,
Oded.

Right click -> Options -> Skins -> Advanced>>> -> Todo List -> Settings... -> Variables -> Todolist Width

Thank you for your help.

Much appreciated :)

Oded.
