## Can't import events from past version

Posted by lucy - 2007/01/09 06:14

---

I followed all the steps in the FAQ and I get a popup error which says: "Import Failed!". I was using Rainlendar Version 0.19.3, is this perhaps too old a version? Is there anything I can do to import the events/to do list?

Yes, it's probably too old version. You can download the 0.22.1, install it and it'll convert the events file to the newer format which you can import with Rainlendar2. The 0.22.1 is available at: <http://ipi.fi/~rainy/legacy.html>

Thank you so much for that, it worked a treat. I'm loving the new version!

It didnt work for me. I also got import failed. Downloaded and installed the 0.22.1 version. Then tried to install the new version and import failed again.

Note: after installing 0.22.1 version, I can no lonter use it. I can't click on it to end it. I have to end it through ctl/alt/del.
