
Rainlendar sync with Outlook 2010

Posted by joachimstaller - 2012/03/26 10:10

Hello,

my problem is that Rainlendar only show`s Calendar, Reminders and so on the desktop, if i open and closed the setting page from Rainlendar.

After an normal reboot from the PC the programm starts up to the desktop but no info like appointment or any else is shown.

What can this happen

Rainlendar is in PRO and Ver 2.8.1

Greetings

Lothar Joachimstaller

Can you run Rainlendar in the debug mode mode and send the log file to me (use the Rainlendar's support address)? I can check if it has any reason why the events are not read on startup.
