## SOLVED: Outlook 2003 Labels

Posted by BoudewijnD - 2012/04/03 08:41

---

Hi,

I tried several thing to import the labels from Outlook. However Rainlendar changes the labels to default categories. This is not the issue as long as I can change the color of the default labels. But the categories button in the skin section does not have the same values for the categories as shown in the calendar.

So is the away to edit the default categories so that I can change the views in the calendar?

You can create also new categories with the category editor.

I tried that creating categories with simmilair names as my labels however on import/syncing it pick only the default categories and not the one I created....

What I'm doing wrong...

Have you changed the labels in Outlook? Outlook doesn't return that information to Rainlendar so the labels will always have fixed names when they are read no matter what they are called in Outlook. Rainlendar converts the labels to one of the following category names:

"None"  
"Important"  
"Work"  
"Personal"  
"Vacation"  
"Must Attend"  
"Travel Required"  
"Needs Preparation"  
"Birthday"  
"Anniversary"  
"Phone Call"

Thanx Rainy.

That was t he missing link. Now I created some new categories that match those in Outlook and it work.

In due time I will remmber the different names in Outlook and Rainlendar.

So once again thanks. :woohoo:
