
Google Calendar does not synchronise

Posted by IanRH - 2012/04/10 10:44

My Google account has two step verification and when I try to synchronise with RainLendar I see an error message

Google Error (Dummy)
Unable to authenticate to Google
Server returned result (O) 403 Forbidden
Error=Badauthcentication
Info=InvalidSecondFactor.

I do like the program and will pay and register if I can solve this problem

Regards

IanRH

Are you using the latest beta version?

Re: Google Calendar does not synchronise

No I am using the 32 bit Windows version 2.9 (b111) on a 64 bit machine.

I did not see a download for the beta version.

I only realised when I read this that I have the wrong bit version, should I remove and set up again.

Very impressive program.

Regards

Enjoy it. I use the pro version for almost 2 years now and still good to go.

:)
