
Alarms are not working

Posted by alarmrx2 - 2012/04/13 00:44

Hi. My alarms are not working. :angry: I do not get the pop-ups, sounds or anything. I have updated program, then backed up, deleted, reinstalled program & back up... & it still doesnt work. I live by these alarms (for years I think) :side: so I need them back.
Please???? Thank You

Have you tried to reset the settings from the Options dialog? You should also verify that the ignore alarms is not set in the calendar's settings and it is not set as read only.

Yes I have. I created a back up copy- then deleted the program. This is the second time. I waited until I rebooted the next day & reloaded the program, and it worked this time! And I was able to figure out how to get my back up reloaded. I have been able to re-size the monthly calendar with the free plug in (thanks to FAQ), but when I do my task & event list disappear. I am sure there may be an answer on the plug-in site. Crossing my fingers.
