
Overlapping after font size changes...

Posted by scylor - 2012/04/13 09:10

Hi guys,

I'm using chromophore in week view and I'd like to increase font size. Problem is: As soon as I increase it, Stuff is overlapping everywhere. Is there any solution to this?

Thanks in advance =)

The skins are usually created for a specific font size so increasing it too much will break the layout. Your only option pretty much is to edit the skin and adjust the item sizes for the new font size. You can find skinning tutorial and reference documents from Rainlendar's help file which contains the info how to edit the skins.
