
Offline question with Ubuntu 12.04

Posted by keuu2002 - 2012/04/15 07:51

Does anyone use Rainlendar 2.9 b111 with Ubuntu 12.04 64-bit?

I use that and find it can't show offline calendar with google calendar when network disconnected, and I just want to ask anyone has the same situation?

Because Ubuntu 12.04 is just in final beta, so I just take a discussion to discuss it! :laugh:

I tried that but the offline calendar seems to work fine in the latest Ubuntu. Can you send the Rainlendar's debug log to the support address and I'll check what's wrong?
